PROFILE

Physician and epidemiologist (MBBS, MPH) working on type 2 diabetes and other metabolic noncommunicable diseases; currently Scientist-B (Medical) at the ICMR National Institute of Health Research (ICMR-NIHR), Jodhpur. My work applies causal inference to trial and observational data, with methodological strengths in mixed-effects models for longitudinal and clustered designs, missing-data methods, and evidence synthesis, all conducted reproducibly in R and Quarto. I came to research from clinical medicine, having led Kerala's statewide type 1 diabetes care programme across all 14 districts, and I aim to build the evidence that programme and policy decisions on chronic disease in India rely on.

WORK EXPERIENCE

Scientist-B (Medical)

Aug 2026 – Present

ICMR National Institute of Health Research, Jodhpur

- Research on metabolic NCDs. Newer studies under pipeline.

Project Research Scientist (PRS-II)

Oct 2025 – Aug 2026

ICMR – National Institute of Epidemiology, Chennai

- Co-designed the WhatsApp-based lifestyle-modification intervention for the ICMR-DPCI study — a multicentre hybrid type 2 pragmatic cluster-randomised trial across urban primary health centres in Chennai and Jabalpur — and coordinated across both sites and with implementation partner Arogya World India Trust.
- Led the complete statistical analysis of a cluster-randomised trial of a low-carbohydrate dietary intervention in Chennai — from data preparation to final effect estimates: cluster-robust ANCOVA, linear mixed models, and multiple imputation for missing data.
- Conducted a systematic review and meta-analysis of point-of-care HbA1c for diabetes diagnosis — QUADAS-3 risk-of-bias assessment, bivariate meta-analysis of diagnostic accuracy, and GRADE certainty assessment.
- Initiated and continue to lead a systematic review and meta-analysis of the joint effect of physical activity and diet on mortality.

Medical Officer/ Project Coordinator

Apr 2022 – Jul 2023

Kerala Social Security Mission, Thiruvananthapuram

- Oversaw statewide implementation of a comprehensive care programme for children with type 1 diabetes, managing clinic operations across all 14 districts of Kerala for 1,500+ beneficiaries, with a six-member team and an annual budget of ₹38 million.
- Expanded access to specialised care by establishing 9 new subcentres in previously uncovered districts, achieving 100% district coverage.
- Led a statewide capacity-building initiative that integrated a diabetes education module into Kerala's annual in-service training curriculum, institutionalising school-level awareness.
- As Project Coordinator (Feb–Jul 2023), monitored delivery of a state welfare programme for vulnerable populations, resolving operational gaps and working with NGOs and government agencies to extend service coverage.

EDUCATION

Master of Public Health (MPH)

Jul 2023 – Jun 2025

Sree Chitra Tirunal Institute for Medical Sciences & Technology, Thiruvananthapuram

Thesis: **Assessing the Role of Delays in TB Detection and Control Strategies on Transmission Dynamics — A Synthetic Population Approach in Thiruvananthapuram, Kerala**

- Designed an agent-based model simulating TB transmission in a dynamic synthetic population of Thiruvananthapuram (~3.4 million agents), specifying natural history parameters, agent behaviours, and daily contact patterns, and collaborating with a programmer on implementation in Julia.
- Integrated state TB registry data for baseline disease states and model calibration, conducting secondary data analysis to inform parameter estimates.
- Simulated TB incidence from 2025 to 2030 under varying diagnostic delays and coverage levels of household screening and preventive therapy, framing the work as simulation-based policy analysis.

- Registered with the Kerala State Medical Council (Reg. No. 85285, 2022).

Diagnostic accuracy of point-of-care HbA1c devices against laboratory high-performance liquid chromatography for detecting type 2 diabetes in adults: a systematic review and meta-analysis. Submitted to *Diabetes Research and Clinical Practice*, 2026. ([†]Joint first authors).

VOLUNTEERING & LEADERSHIP

- Facilitator, Workshop on GIS for Public Health Using R — Belagavi, Karnataka (Mar 2025). Hands-on spatial analysis training in R for ~30 researchers and public health professionals at a national conference.
- External Monitor, World Health Organization — Palakkad, Kerala (Mar 2024). Field monitoring of Pulse Polio Immunization Programme activities, verifying coverage and quality of booth and house-to-house activities.
- General Secretary, Students' Union, Government Medical College Thiruvananthapuram (2017–2018). Elected representative for 2,000+ students; coordinated 25+ academic and cultural events.
- Organising Committee Member (Finance), Medex 2017, Kerala University of Health Sciences. Managed a ₹17.5 million budget for a state-level medical exhibition.

SKILLS & CERTIFICATIONS

Methods: Randomised trial design and analysis, mixed-effects models, missing data and multiple imputation, systematic review and meta-analysis (including diagnostic test accuracy), GRADE, agent-based and transmission modelling, spatial analysis.

Tools: R (tidyverse, lme4, metafor, mice, emmeans, targets, Quarto), GIS in R, ODK, LaTeX.

Other: Programme management, stakeholder engagement, scientific writing, training and facilitation.

Certification: Google Data Analytics (Google, 2023).
